DETAILED ACTION

Election/Restrictions

Claims 7-48 are withdrawn from further consideration pursuant to 37 CFR 1.142(b), as being drawn to a nonelected claims, there being no allowable generic or linking claim. Applicant timely traversed the restriction (election) requirement in the reply filed on 3/10/06.

Applicant's election with traverse of claims 1-6 in the reply filed on 3/10/06 is acknowledged. The traversal is on the ground(s) that claim 1 is generic. This is not found persuasive because the dependent claims constitute a great number of distinct species which requires a burdensome search. Upon allowance of the generic claim, the Applicant may be entitled to rejoinder for the remaining species.

The requirement is still deemed proper and is therefore made FINAL.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claims 1-4, 6 are rejected under 35 U.S.C. 102(e) as being anticipated by Holmes et al ('813)

Application/Control Number: 10/707,996

Art Unit: 2813

The applied reference has a common assignee with the instant application. Based upon the earlier effective U.S. filing date of the reference, it constitutes prior art under 35 U.S.C. 102(e). This rejection under 35 U.S.C. 102(e) might be overcome either by a showing under 37 CFR 1.132 that any invention disclosed but not claimed in the reference was derived from the inventor of this application and is thus not the invention "by another," or by an appropriate showing under 37 CFR 1.131.

Holmes teaches the following claimed limitations as cited below:

1. (original) A method of manufacturing a structure, comprising the steps of:
providing a structure having an insulator layer with at least one interconnect (Fig.12(
oxide/electrode);

forming a sub lithographic template mask over the insulator layer (Fig.12(oxide- layer 8 in Fig.5); and

selectively etching the insulator layer through the sub lithographic template mask to form sub lithographic features spanning to a sidewall of the at least one interconnect (Fig.15- part of the SiN and oxide 2a is removed).

2. (original) The method of claim 1, wherein the sub lithographic features are substantially vertical columns in the insulator layer (Fig.15).

Art Unit: 2813

- 3. (original) The method of claim 2, wherein the sub lithographic features further include a plurality of holes formed in a capping layer beneath the sub lithographic template mask and having a diameter or cross section less than a diameter or cross section of the at least one interconnect and also substantially equal to the substantially vertical columns in the insulator layer (Fig.13-see the capping layer formed between the mask pattern made of SiNit).
- 4. (original) The method of claim 1, wherein the etching step is an anisotropic etching forming a plurality of the sub lithographic features defined as nano columns (Col.5, lines: 1-5).
- 6. (original) The method of claim 1, wherein: the sub lithographic features are substantially vertical columns in the insulator layer; the sub lithographic features further include a plurality of holes having a diameter less than a diameter of the at least one interconnect and substantially equal to the substantially vertical columns in the insulator layer and a top portion of the holes are tapered (Fig. 10- the examiner considers the hexagonal structure to be a form of tapering).

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Application/Control Number: 10/707,996

Art Unit: 2813

Claim 5 is rejected under 35 U.S.C. 103(a) as being unpatentable over Holmes et al (*813).

5. (original) The method of claim 4, wherein the etching step includes an isotropic etching to meld at least adjacent nano columns together and provide an undercut below the at least one interconnect- Applicant admits in the specification that of ordinary skill in the art would understand how to continue etching to form an undercut region from the trenched regions forming by sublithographic etching.

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Laura M. Schillinger whose telephone number is (571) 272-1697. The examiner can normally be reached on M-T, R-F 7:00-5:00.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Carl W. Whitehead, Jr. can be reached on (571) 272-1702. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
